Optimizely

REGULATED CONTENT READINESS

Catch regulated-content issues before they become review-cycle problems

PROBLEM

Marketing teams often find claim, context and readiness issues after briefs, content and page work are already underway.

That creates rework, slows formal review and puts more burden on MLR teams.

SOLUTION

Move the readiness check upstream into the places marketers already work.

A campaign brief in ClickUp, a request in Optimizely AI Chat or a draft in WordPress enters the same governed readiness process.

INTENDED RESULT

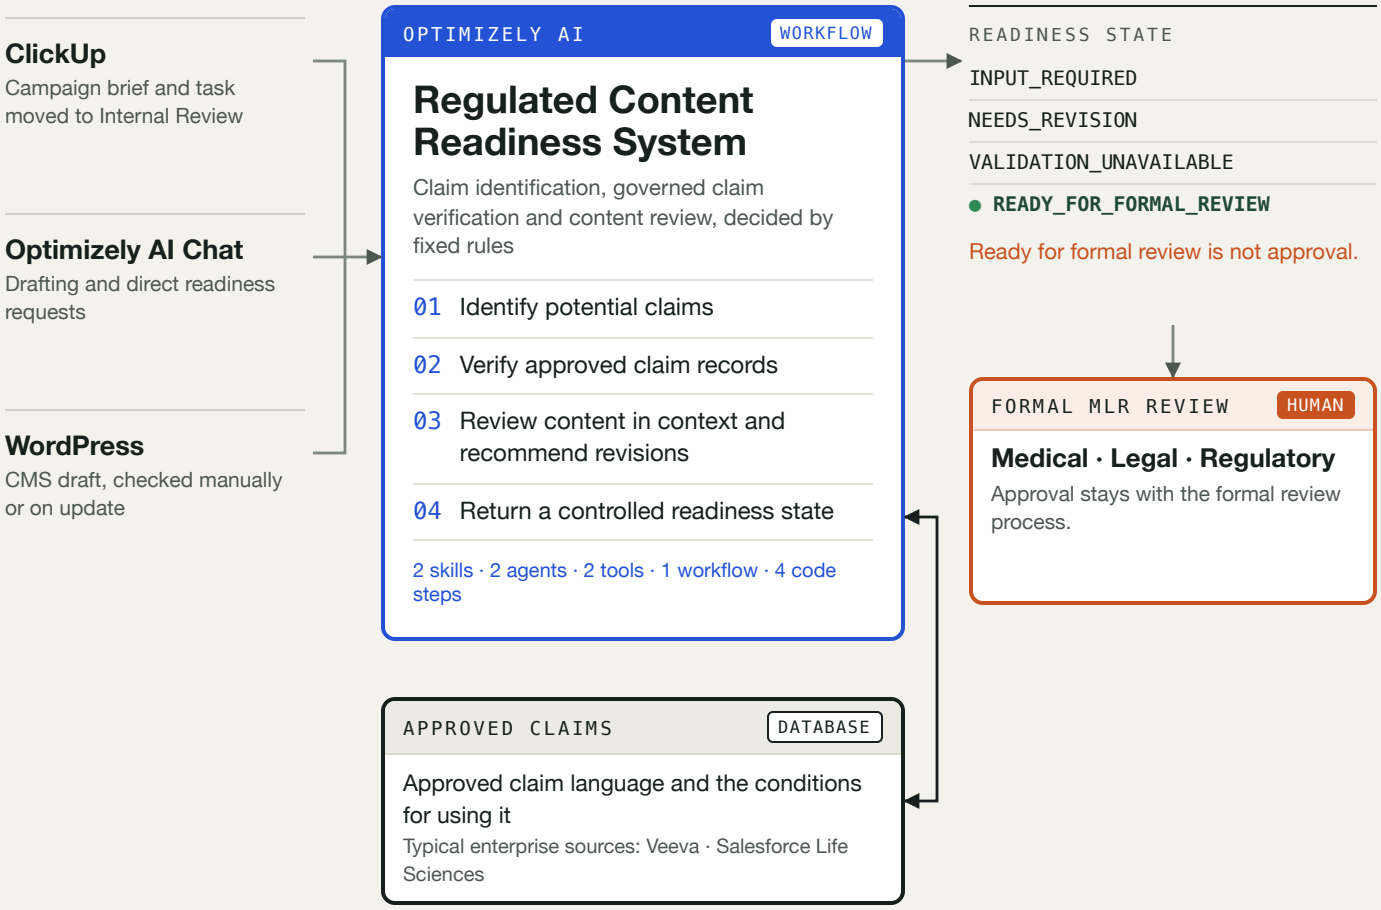

Issues surface earlier.

Marketers know what needs attention before formal review, while Medical, Legal and Regulatory teams keep approval authority.

Reduce late-stage rework. Shorten the path to formal review.

One governed readiness process across the places marketers already work.

PHARMACEUTICAL COMPANY: OptiThera

From reactive to proactive

The readiness check happens while marketing work is being created, before preventable issues move downstream.

TARGET SUCCESS MEASURES intended, not yet measured: Fewer late-stage revisions · Shorter time to formal review · Higher first-pass readiness

WHAT I'D IMPROVE NEXT Measure reviewer agreement and time to formal review · Check required disclaimer text deterministically · Move Guardrails beyond Learning

Optimizely

SOLUTION ARCHITECTURE

The hard part was deciding where AI actually belongs.

HOW I APPROACHED IT

I used AI only where interpretation mattered. Exact checks stayed in tools and workflow logic.

WHAT WAS HARD

Deciding what belonged in an agent, a tool or code. I settled on 2 agents and 4 code steps: code checks inputs, sets the state, then packages and delivers the result.

WHAT I LEARNED FROM TESTING

01 EXECUTION TRACING
A trace showed the agent changing an invalid market value (USA to US). I tightened the instructions so caller inputs are never rewritten.

02 CHAT
Chat once wrote a plausible readiness answer without running the workflow. Execution history showed it. The Intake Skill now requires the workflow run and forbids its own verdict.

03 EVALS
One attached example biased the judge, so I treated scores as evidence to inspect and read the outputs directly.

04 GUARDRAILS
A stalled run made a second validator call. Guardrails stay in Learning mode until there is more run history.

Regulated Content Readiness Workflow

PHARMACEUTICAL COMPANY: OptiThera

Shared standard. Both agents use the same review instruction.

Stop early. Missing inputs stop before agent reasoning.

AI where it helps. Agents interpret claims and content context.

Exact facts + control. Tools retrieve governed facts; code controls routing and states.
