Optimizely

REGULATED CONTENT READINESS

Catch regulated-content issues before they become review-cycle problems

PROBLEM

Regulated-content issues are often discovered after briefs, copy and page work are already underway.

That means rework, slower formal review and more work for MLR teams.

SOLUTION

Move the readiness check earlier, into the places marketers already work.

A brief in ClickUp, a request in Optimizely AI Chat or a draft in WordPress all go through the same readiness check.

INTENDED RESULT

Issues surface earlier.

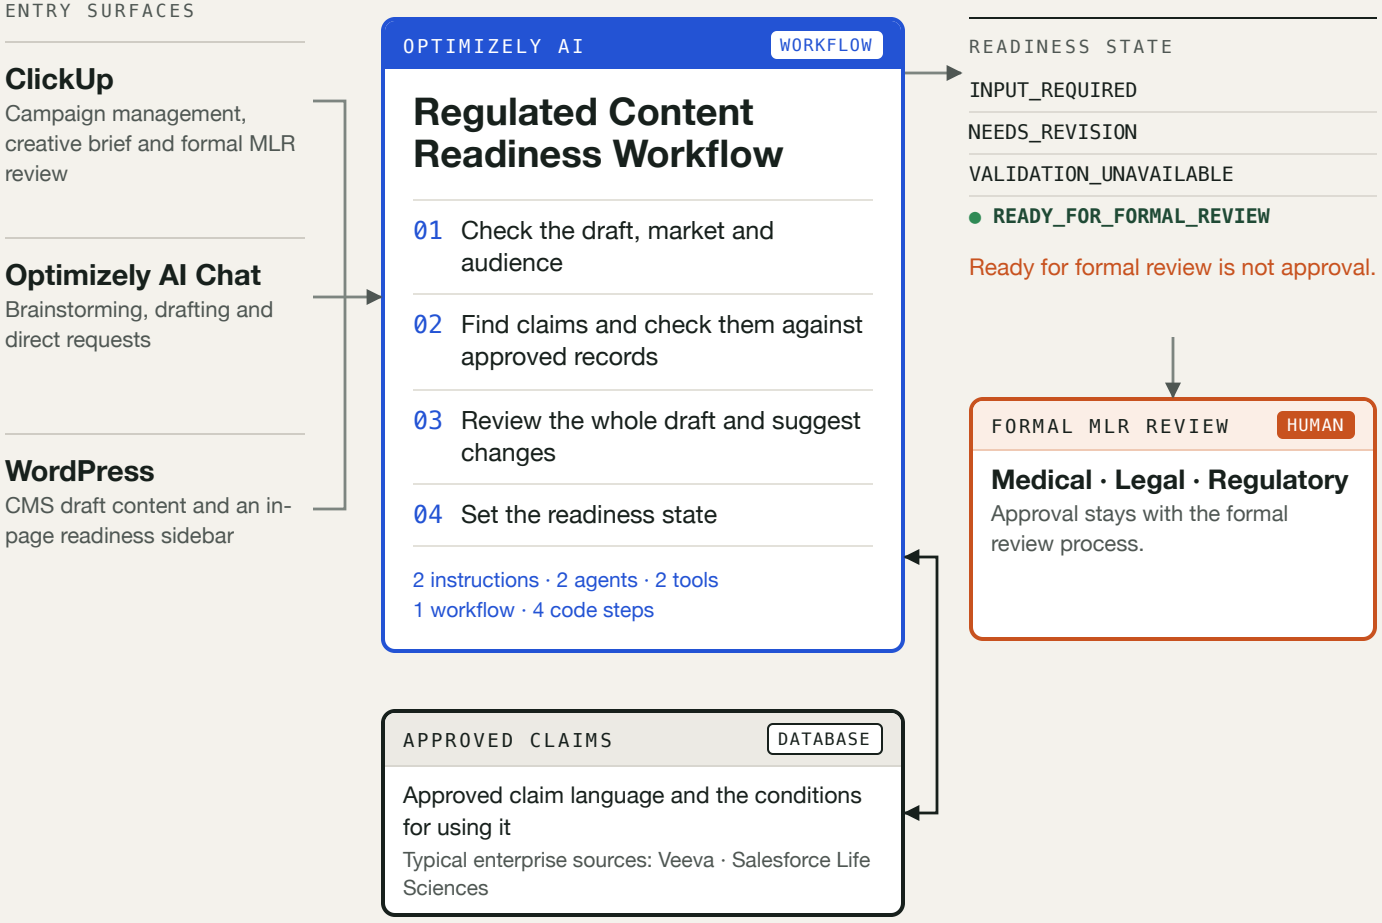

Marketers know what needs attention before formal review, while Medical, Legal and Regulatory teams keep approval authority.

github.com/alexdesigns/fde-opti

Reduce late-stage rework. Shorten the path to formal review.

PHARMACEUTICAL COMPANY: OptiThera

One governed readiness process across the places marketers already work.

Checked while it's being written

Marketers see claim and content problems while they're still drafting, before the work reaches formal review.

TARGET SUCCESS MEASURES intended, not yet measured

Fewer late-stage revisions · Shorter time to formal review · Higher first-pass readiness

Optimizely

SOLUTION ARCHITECTURE

Deciding where AI belongs was the hard part.

HOW IT WORKS

A marketer starts in Chat, ClickUp or WordPress. Every request runs through one workflow: code checks the inputs, one agent finds claims, a tool checks them against approved records, a second agent reviews the draft, and code sets the state. People still approve.

WHAT WAS HARD

Some answers looked right and were wrong. During the build, Chat once gave a convincing readiness answer without running the workflow, and an agent changed “USA” to “US” so a claim check would pass. The run history showed both, and I fixed the instructions. A plain “yes” didn’t reliably start the governed workflow, so the final experience requires an explicit request.

WHAT I LEARNED

I trust a result only when I can see the run behind it. Anything with one right answer, like a claim fact or the final state, goes in a tool or code. The AI does the reading and the judgment. When something broke, I fixed only the part that owned the problem.

WHAT TESTING SHOWED

Check first, then spend. An incomplete request stops before either agent runs.

AI judgment can vary. On one rerun of the same draft, the reviewer asked for a revision it hadn’t before. That’s normal for a language model. The same checks ran and code still set the state.

Known limits. The callback cannot verify the identity of the calling system, and Chat may change spacing in pasted text.

WHAT I’D DO NEXT

Check required disclaimers in code, flag when no claim needed checking, add evaluation scoring, and connect a real MLR system.

github.com/alexdesigns/fde-opti

How the governed workflow actually works

AI reads and judges. Tools check the facts. Code sets the state and route. People approve.

PHARMACEUTICAL COMPANY: OptiThera

CHAT ENTRY

Optimizely AI Chat

PRIMARY INSTRUCTION

IN0 - OptiThera Content Intake

Collects the draft, market and audience

TR1 CHAT TRIGGER

WORK SURFACES

ClickUp

Starts when a task moves to Internal Review

WordPress

Runs on request, or on save when auto-run is on

TR2 WEBHOOK TRIGGER

SHARED INSTRUCTION

RC1-RC2 - Regulatory Review Policy

Rules both agents follow, including what they may not decide

RETURN TO WORKSTREAM

The result returns to ClickUp, WordPress or Chat.

REGULATED CONTENT READINESS WORKFLOW

IN1 · REQUEST CONTEXT — CODE

Checks the draft, market and audience

◇ G1 Inputs complete? — NO / YES ↓

RC1 · CLAIM AGENT — AGENT

RC1 - Claim Identification & Explanation Agent

Finds regulated claims and explains why they matter.

IN draft · market · audience · as-of date
OUT claims + validation results + explanations

validate_approved_claim — TOOL

OptiThera approved claims

Looks up each cited claim in the approved records. One call checks them all.

IN claim_ids · market · audience
OUT status · reasons · wording · disclaimer

◇ G2 Claim review usable? — NO / YES ↓

RC2 · REVIEWER AGENT — AGENT

RC2 - Draft Risk Reviewer

Reads the whole draft and lists problems. It never sets the state.

IN draft · market · audience
OUT blocking and advisory findings + optional suggested revisions

RC3 · DECISION · READINESS STATE — CODE

Code applies fixed rules and picks one state.

INPUT_REQUIRED | NEEDS_REVISION | VALIDATION_UNAVAILABLE

READY_FOR_FORMAL_REVIEW
Ready for human review. This is not approval.

RC4 · PACKAGE — CODE

Bundles state and findings

RC5 · DELIVER — CODE

Sends it back: ClickUp tools or the callback tool

BUILT IN OPTIMIZELY AI

- 2 instructions
- 2 specialized agents
- 2 custom tools
- 1 workflow
- 4 code steps
- 2 deterministic gates
- 2 triggers

VERIFIED CLAIMS — DATABASE

Approved claims / MLR repository

Typical enterprise sources: Veeva · Salesforce Life Sciences

ADVANCE TO FORMAL REVIEW

ClickUp: ready tasks move to Formal Review. A person assigns the reviewer.

FORMAL MLR REVIEW — HUMAN

Medical · Legal · Regulatory
Human approval required
Happens outside this workflow.

RECOMMENDATIONS

When a draft needs revision, a finding can include **approved wording**, a **required disclaimer** or a **suggested rewrite**. Suggestions are not approved copy. A person decides.

submit_readiness_result — TOOL

OptiThera Readiness Callback

Sends the result back to the system that submitted it, such as WordPress.
