Optimizely

REGULATED CONTENT READINESS

Catch regulated-content issues before they become review-cycle problems

PROBLEM

Marketing teams often find claim, context and readiness issues after briefs, content and page work are already underway.

That creates rework, slows formal review and puts more burden on MLR teams.

SOLUTION

Move the readiness check upstream into the places marketers already work.

A campaign brief in ClickUp, a request in Optimizely AI Chat or a draft in WordPress enters the same governed readiness process.

INTENDED RESULT

Issues surface earlier.

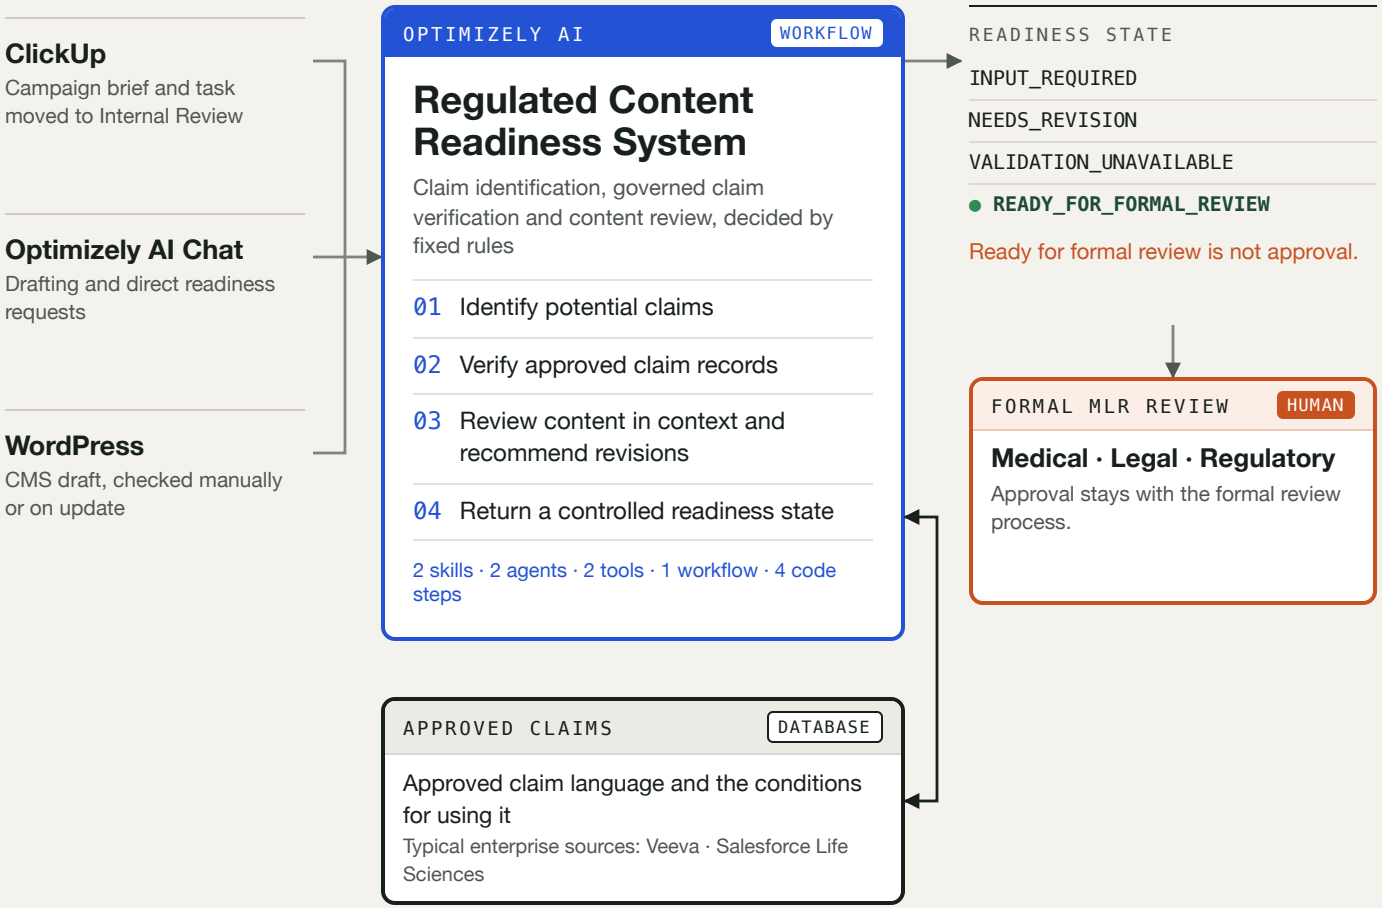

Marketers know what needs attention before formal review, while Medical, Legal and Regulatory teams keep approval authority.

github.com/alexdesigns/fde-opti

Reduce late-stage rework. Shorten the path to formal review.

PHARMACEUTICAL COMPANY: OptiThera

One governed readiness process across the places marketers already work.

From reactive to proactive

The readiness check happens while marketing work is being created, before preventable issues move downstream.

TARGET SUCCESS MEASURES intended, not yet measured: Fewer late-stage revisions · Shorter time to formal review · Higher first-pass readiness

WHAT I'D IMPROVE NEXT Measure reviewer agreement and time to formal review · Check required disclaimer text deterministically · Move Guardrails beyond Learning

Optimizely

SOLUTION ARCHITECTURE

The hard part was deciding where AI actually belongs.

HOW I APPROACHED IT

I used AI only where interpretation mattered. Exact checks stayed in tools and workflow logic.

WHAT WAS HARD

Deciding what belonged in an agent, a tool or code. I settled on 2 agents and 4 code steps: code checks inputs, sets the state, then packages and delivers the result.

WHAT I LEARNED FROM TESTING

01 EXECUTION TRACING
A trace showed the agent changing an invalid market value (USA to US). I tightened the instructions so caller inputs are never rewritten.

02 CHAT
Chat once wrote a plausible readiness answer without running the workflow. Execution history showed it. The Intake Skill now requires the workflow run and forbids its own verdict.

03 EVALS AND GUARDRAILS
One example biased the judge, so scores are evidence to inspect. Guardrails stay in Learning mode.

04 WHAT I LEARNED ABOUT OPAL
Skills shape behavior, tools hold facts and the workflow holds control. The execution history, not the chat reply, shows what ran.

Regulated Content Readiness Workflow

PHARMACEUTICAL COMPANY: OptiThera

MAIN AGENT

INSTRUCTION / SKILL

OptiThera Regulated Content Intake
Chat entry. A request runs the workflow; a bare draft gets a question first. Never judges readiness.

CMP & CONTENT

ClickUp
Task moves to Internal Review

WordPress
Run manually or on update

WEBHOOK API

RETURN TO WORKSTREAM
Results return to ClickUp, WordPress or Optimizely AI Chat.

OPTIMIZELY AI — WORKFLOW

IN1 · REQUEST CONTEXT — CODE
Checks the draft, market and audience before review

◇ Inputs complete? — NO / YES ↓

RC1 · CLAIM AGENT — AGENT

Claim Identification & Explanation Agent
Finds regulated claims and explains why they matter.

SKILL Regulated Content Review Standard

IN draft · market · audience · as-of date (optional)
OUT potential claims + explanations

validate_approved_claim — TOOL

OptiThera Approved Claims
Verify exact governed claim facts

IN claim_ids · market · audience · as_of_date
OUT status · reasons · approved wording · disclaimer

◇ Claim validation usable? — NO / YES ↓

RC2 · REVIEWER AGENT — AGENT

Content Readiness Reviewer
Reviews the full draft in context and suggests revisions where a rewrite is safe.

SKILL Regulated Content Review Standard

IN draft · market · audience
OUT structured findings + optional suggested revisions

RC3 · DECISION · READINESS STATE — CODE
Fixed rules set one state.

INPUT_REQUIRED | NEEDS_REVISION | VALIDATION_UNAVAILABLE

READY_FOR_FORMAL_REVIEW
Only state that advances to formal review

RC4 · PACKAGE — CODE
State · findings · recommendations

RC5 · DELIVER — CODE
ClickUp: connector · Lab / CMS: callback tool

BUILT IN OPTIMIZELY AI
- 2 skills
- 2 specialized agents
- 2 custom tools
- 1 workflow
- 4 code steps

VERIFIED CLAIMS — DATABASE

Approved claims / MLR repository
Database of verified claims
Typical enterprise sources: Veeva · Salesforce Life Sciences

ADVANCE TO FORMAL REVIEW
ClickUp → Formal Review · reviewer assignment remains human

FORMAL MLR REVIEW — HUMAN
Medical · Legal · Regulatory
Human approval required
Formal review happens outside this workflow.

RECOMMENDATIONS
NEEDS_REVISION findings can carry one: **Approved wording** or **Required disclaimer** (exact governed text), or **Suggested rewrite** (not approved copy). A person decides; the revised draft is checked again.

submit_readiness_result — TOOL

OptiThera Readiness Callback
Returns the readiness result to Lab and WordPress requests. ClickUp is written back by RC5.

Shared standard. Both agents use one instruction, the Review Standard.

Stop early. Missing inputs stop before agent reasoning.

AI where it helps. Agents interpret claims and content context.

Exact facts + control. Tools retrieve governed facts; code controls routing and states.
