Optimizely

REGULATED CONTENT READINESS

Catch regulated-content issues before they become review-cycle problems

PROBLEM

Regulated-content issues are often discovered after briefs, copy and page work are already underway.

That creates avoidable rework, slows formal review and adds burden on MLR teams.

SOLUTION

Move the readiness check upstream into the places marketers already work.

A campaign brief in ClickUp, a request in Optimizely AI Chat or a draft in WordPress can enter the same governed readiness process.

INTENDED RESULT

Issues surface earlier.

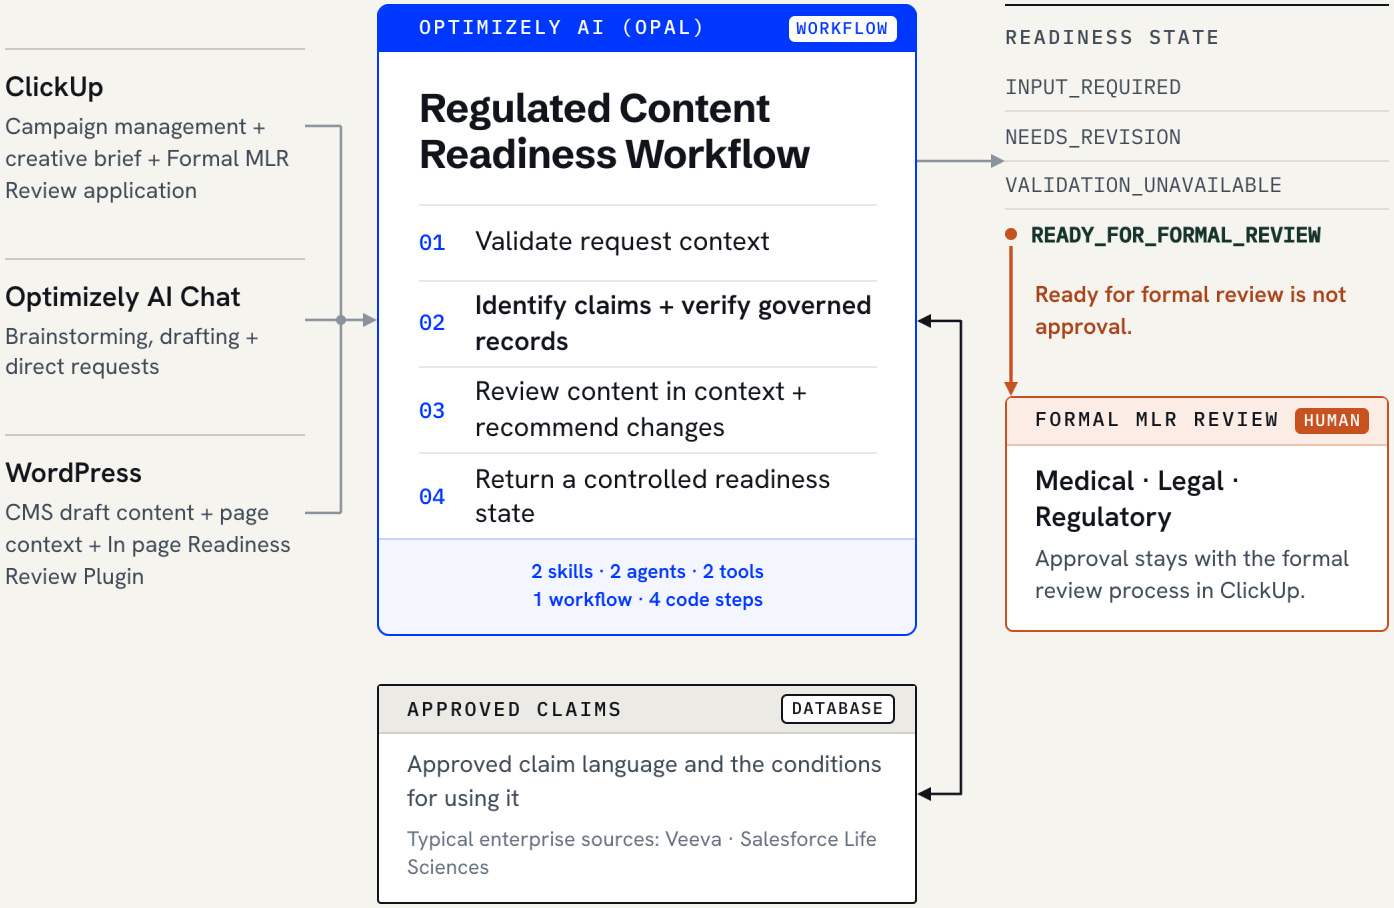

Marketers know what needs attention before formal review, while Medical, Legal and Regulatory teams keep approval authority.

github.com/alexdesigns/fde-opti

Reduce late-stage rework. Shorten the path to formal review.

One governed readiness process across the places marketers already work.

PHARMACEUTICAL COMPANY: OptiThera

From reactive to proactive

The readiness check happens while marketing work is being created, before preventable issues move downstream.

TARGET SUCCESS MEASURES

Fewer late-stage revisions · Shorter time to formal review · Higher first-pass readiness

NEXT

Deterministic disclaimer validation · Expanded evals · Governed MLR integration · Guardrails beyond Learning

Optimizely

SOLUTION ARCHITECTURE

The hard part was deciding where AI actually belongs.

MAIN INSTRUCTION · HOW USERS INTERACT

OptiThera Regulated Content Intake structures the request and invokes the governed workflow.

- Gathers draft, market and audience
- Asks before running when intent is not explicit
- Runs immediately on an explicit request
- Never returns its own readiness verdict

WHAT WAS HARD

Execution tracing showed that a correct-looking answer can still take the wrong path. Chat once returned a readiness verdict without invoking the governed workflow.

I tightened the Intake instruction so the workflow must run before a readiness state can be returned.

An agent also normalized an invalid market value from USA to US. I changed the instruction so caller inputs are preserved rather than silently rewritten.

WHAT I LEARNED ABOUT OPAL

Opal was most effective when agents handled interpretation, tools supplied governed facts, and workflow/code enforced validation, routing and allowed states.

Execution history mattered as much as the final answer because it showed whether the intended agent, tool and workflow actually ran.

github.com/alexdesigns/fde-opti

How the governed workflow actually works

AI interprets. Tools verify governed facts. Code controls state and routing. People approve.

WordPress

CMS content · gateway-tested

WEBHOOK API

SHARED INSTRUCTION / SKILL

Regulated Content Review Standard

Review guidance, authority boundaries and recommendation rules used by both agents.

RETURN TO WORKSTREAM

Readiness result returns to ClickUp, WordPress or Optimizely AI Chat.

Regulated Content Readiness Workflow — WORKFLOW

VALIDATE REQUEST CONTEXT — CODE

NO ◇ Inputs complete? YES ↓

CLAIM AGENT — SPECIALIZED AGENT

Claim Identification & Explanation Agent

PURPOSE: Identifies potential regulated claims and explains why they matter.
INPUT: Draft + market + audience + context
OUTPUT: Claim findings + governed validation results
USES: Regulated Content Review Standard (shared)

validate_approved_claim — TOOL

OptiThera Approved Claims

Verifies exact governed claim records for market, audience and effective date.

IN: claim_ids · market · audience · as_of_date
OUT: status · reasons · approved wording · required disclaimer

NO ◇ Claim validation usable? YES ↓

REVIEWER AGENT — SPECIALIZED AGENT

Content Readiness Reviewer

PURPOSE: Reviews the full draft in context and identifies readiness issues.
INPUT: Draft + market + audience
OUTPUT: Blocking/advisory findings + optional suggested revisions
USES: Regulated Content Review Standard (shared)

DECISION STATE · READINESS STATE — CODE

One of four allowed states. No APPROVED state.

INPUT_REQUIRED · NEEDS_REVISION · VALIDATION_UNAVAILABLE

READY_FOR_FORMAL_REVIEW
Only state that advances to formal review

PACKAGE · READINESS — CODE
State · Last Checked · Structured comment

DELIVERY · RESULTS — CODE
External delivery to update workstream

BUILT IN OPTIMIZELY AI

- 2 instructions / skills
- 2 specialized agents
- 1 agent workflow
- 2 custom tools
- 4 Python code steps
- 2 deterministic gates
- 2 triggers

VERIFIED CLAIMS — DATABASE

Approved claims / MLR repository

Database of verified claims

Typical enterprise sources: Veeva · Salesforce Life Sciences

submit_readiness_result — TOOL

OptiThera Readiness Callback

Returns the packaged readiness result to callback-based originating experiences.

FORMAL MLR REVIEW — HUMAN

Medical · Legal · Regulatory

Formal approval remains human-owned.

Formal review happens outside this workflow.
